

MC Synergy Flow Totalizer

Setting new standards in condition-based monitoring.

Cut time from detection to correction with diagnostics, when used with NUFLO and BARTON turbine meters

Wirelessly upload individual meter data from QR code attached to NUFLO and BARTON turbine meters and kits, including multipoint calibration values. No internet connection required – it's all in the code! Complimentary Digital Data Plate smart device app allows QR code data upload and device configuration, right from your Apple or Android device.

- + Real time monitoring of damage to meter, process flow stability, battery life remaining, and much more
- + Use HART or Ethernet to seamlessly connect to automation networks
- + Reduce time to deploy, while eliminating configuration errors
